

Eighth GEBCO Science – presentation abstract

Institute of Marine Sciences - National Research Council (ISMAR-CNR), Venice, Italy, 8th October 2013

Poster presentation title: Smart Globe with GEBCO Worldmap and Gazetteer

Author: Jang Hyun An; Korea Hydrographic and Oceanographic Administration, Busan, Republic of Korea

Abstract

This geographic information service integrates various types of contents, including the B-8 Gazetteer of Geographical Names of Undersea Features, web cartoons, and games in order to promote the public understanding and awareness of GEBCO activities and ocean topography across the world.

KHOA is currently developing a globe and associated applications which allocate cell positional information to the GEBCO World Map globe and allow it to be recognized by smart phone cameras with the 80% or above optimized recognition rate and speed. (To be completed by 2014)
