

ROMANIZATION OF RUSSIAN GEOGRAPHICAL NAMES (UN SYSTEM)

(taken from Doc. E/CONF.94/CRP.8 of the 8th UN Conference on the Standardization of Geographical Names, Berlin, Germany, 27 Aug – 5 Sept 2002)

Russian

The United Nations recommended system was approved in 1987 (V/18), based on the official system of the Main Administration of Geodesy and Cartography of the former Soviet Union, also known as the GOST 1983 system (GOST 16876-71). The table was published as an annex to the resolution²⁷.

The system is used in the Russian Federation and increasingly in international cartographic products.

Russian uses the Cyrillic alphabet which is alphabetic. The romanization table is unambiguous and can be applied automatically. The system is reversible, although very rarely there can be ambiguities. For example, a geographical name Ojusardah of the Sakha Republic (Yakutia) is reconstituted as Ойусардах in the Cyrillic source script, not Оюсардах as would seem logical.

Other systems of romanization

The **BGN/PCGN 1947 System** provides for the romanization, as a single block, of the following characters differently from the UN system (the Cyrillic character is followed in parentheses by the romanization according to the UN system):

е (e)	е, ye [^]	й (j)	y	ч (č)	ch	э (è)	e
ë (ë)	ë, ye [^]	х (h)	kh	ш (š)	sh	ю (ju)	yu
ж (ž)	zh	ц (c)	ts	щ (šč)	shch	я (ja)	ya

[^] Initially, after the vowel characters and after й, ь, and ъ.

The transliteration of Cyrillic characters contained in the standard **ISO 9:1995** provides for the romanization, as a single block, of the following characters differently from the UN system:

щ (šč)	š	ю (ju)	û	я (ja)	â
--------	---	--------	---	--------	---
